

OEC LLS SHARK TANK: SAFE, DURABLE, AND SUSTAINABLE EVEN FOR THE MOST EXPERIENCED TRUCKERS

Inclement weather is a serious issue. Familiar on road maneuvers can become unfamiliar, and difficulties can arise through no fault of the operator.

Unfortunately, in early 2021, a driver carrying inventory belonging to an LLS client experienced truck and chassis rollover during a bout of heavy snow. Fortunately, he walked away unscathed. As for the truck and its cargo, the scene looked hopeless. You can see the corrugated steel container is bent dramatically in certain areas. What you can't see, though, is any discoloration in the snow around the container. What may be surprising to those outside of the OEC Technical Services Team, is that absolutely zero loss of containment occurred in this rollover. The surrounding area experienced no contamination from the accident, and not one drop of liquid escaped our Shark Tank. How is that possible?

One of our OEC Technical Services crews was dispatched immediately to inspect the cargo. They found that our equipment had worked to perfection. The bulkhead held fast, the flexitank remained in position, and the tank's valve was completely unharmed. Our state-of-the-art valve allowed smooth transfer of liquid cargo into a second flexitank. Equipped with a fresh truck, chassis, and Shark Tank, the LLS team was able to successfully fulfill another client order. Inclement weather is a serious issue.
